

Motivation

eTAS (european Training Administration System) is a web-based online training platform and LMS (Learning Management Software) software developed for all employees of Mazda and all employees of the dealers in Europe. The software itself is able to handle training management, e-Learning's, resource management, HR-modules and much more.

Responsibilities

Business Owner: Frank Klosterhalfen (MME)
Technical Owner (IT support): Hans-Peter Petek (MAG)

Background

eTAS is mainly used for the administration of courses – it's a course-administration software and to provide e-Learning content (LMS). Privileged users are able to define courses, define session-dates, define online-tests, check test results, request feedbacks and book resources just to name a few of the features.

The dealers themselves can have a look at the available courses, can book courses online, can have a look into the course-program, can attend tests online, can have a look what is necessary to reach the next certification level, can access elearning's and much more – and all is done online, in a web browser.
