search for courses

- different search criteria
 - course provider
 - coursenumber
 - coursename
 - coursetype
 - certificationlevel
 - ...

- quicksearch
 - · accessible from every point in the application
- upload additional coursematerial (pdf)
- > upload SCORM-packages
 - SCORM 2004 compliant
 - strict validation (optional)
- > define course requirements / target groups
 - different requirement types
 - country
 - company
 - profession
 - reached certificationlevels
 - already done courses
 - language
 - company type
 - indication if the selected user fulfills the requirements
 - on courseview, during courseregistration etc.
 - · display details why user fulfills the requirements or not
 - display an overview of users who fulfill the requirements
- define coursetests
 - multiple choice test
 - define how much points have to be reached to pass the test
 - define a time limit
 - define questions and answers
 - define the weight of questions
 - multiple answers can be correct
 - define the ordering of questions (per number or random)
 - define ratings (e.g. from 80% to 100% \rightarrow excellent)
 - define tests as assessment test
 - when the user passed this test, he/she automatically gains the defined qualificationlevel
- set the course status to inactive/active
 - inactive courses are not available for unauthorized users

2. Training Administration

- create and edit coursedates for courses
 - date and time (from to)
 - time limit for registration

- time limit for deregistration (optional)
- courselocation
- courseroom
- attendee-limit
- trainerteam
- define which hotels can be booked (optional)

➢ view coursedates

- coursedate-details
- access to all editing options
- view the equipment-list of the courseroom
- view the courseroom-allocation chart
- view the courselocation in a google maps popup
- view and print a detailed list of the attendees and their registration status
- change the registration states of users (passed...)
- link to the course billing

COURSE DATE INFORMATION

copy coursedates

- simplifies the creation of new coursedates if only minor changes (e.g. the date) are necessary
- define country-quotas
 - determine how many attendees of which country may register to the coursedate
- book resources
 - book resources from different resourcegroups and resourcepools for the coursedate

- create course certificates and course stickers for attendees
 - pdf format
 - choose between different templates
- send eMails to attendees
 - send an email with individual content to all attendees
 - send detailed information about the training to the companies of the attendees
 - send training details and the subscriber list to any email adresses
 - send a list of hotel bookings to any email adresses
 - remind users of their open invitations
 - remind users of their open online tests
- change courseregistrations
 - change status of a registration
 - for a single attendee or for all attendees
 - grade online tests or change the grading
 - also possible without online test
 - delete registrations

request user feedback

- feedback is shown on startpage for the attendees
- the atteendees are informed by email
- ➤ coursebilling
 - define course fees
 - per course
 - day rate per courseprovider
 - individually per registration
 - charge cancellation fees
 - display and print an overview of registrations and fees
- > assign online tests to attendees
 - define a due date (can be renewed)
 - open online tests are shown on startpage and can be started from there
 - it is also possible to assign a SCORM-course as online test
 - a test can be assigned to one or multiple users
 - the solutions of the test can be locked or unlocked
 - the results of the test can be locked or unlocked
 - online tests can be reseted
- assign test awards to users who passed the online test (optional)
 - winner and/or consolation gift

> online test overview

- per user or per coursedate
- view details of a specific online test

> users can login with username and password

- if they are active and have the according permission
- a user account can be requested for new users
- if a user lost his account data, he can request it

5. Course Registration Management

- register users to courses
 - single users or usergroups
 - various checks are performed during a registration
 - course requirements (have to be set, so that all users can find the course)
 - already existing registrations
 - free seats
 - a hotel can be booked
 - an optional comment can be given and can be changed

COURSEREGISTRATION

The courseregistration is divided into 5 steps. Follow the description of each step (see the right hand side) to register a user to a

	Page 2 of 5

	Back Next	

invite users to courses

- single users or usergroups
- invitations are shown on startpage and sent by email
- the invited user can confirm the invitation
- assign mandatory courses
 - to single users or to usergroups
 - mandatory courses are shown on startpage until they are done

- users are informed by email about the assignment
- > set users on waitinglist
 - an optional comment can be given
 - if e.g. there is currently no coursedate available
 - single users or usergroups
 - if there are available dates, they are shown on startpage (with a registration link)
 - an email is sent if a new coursedate is created
- > transfer registrars from one coursedate to another
- > intuitive registration links are placed in various points of the application

6. Certification Management

- > mutiple qualification paths can be defined per course provider
 - certifications
 - certification levels
 - assigned courses
- > these qualification paths can be assigned to users
 - assignment of multiple paths possible
- reached certifications can be declared
 - achieving date
 - information about achieving type
 - all courses completed
 - assessment test done
 - direct entry by an administrator

Qualification Path: Technician (Mazda Austria GmbH (807) - Aftersales) 🛛 💠 🔂 📇

11. Global Features

eTAS uses the unicode character encoding, so all types of languages and characters (e.g. cyrillic letters) are supported.

Documents about the system can be downloaded directly on the Download page. There are 3 sections with a permission check

DOCUMENTPAGE

This page contains all relevant documents.

- The application is multilingual, currently the languages english, german, france and netherlands are supported. Also the date picker supports now the languages.
- Moreover it is multi-client capable, this means that different mandators can operate on their data independently and without affecting each other.

 \succ On the view pages, there is a page counter, to see the interests of the users.

- eTAS is based on a permission system with about 160 different rights with different validity areas. Roles can be defined and any combination of rights can be assigned to them. These roles can be assigned to users so that every user has the accurate permissions. Since version 1.4.6 each role has a level (1 to 5). The level authorises the user to only allocate roles for which he has the level. This means that if the user has only the permission for level 1 and 2, he is just allowed to allocate those roles (level 1 and 2) to other users.
- > Every relevant user action is logged and can easily be tracked.
 - various logging areas
 - user

- company

- comments are logged as well (e.g. delete reasons)
- search loggings with different criteria
 - area
 - action
 - user
 - active/inactive
 - date range
 - ...
- The application offers a wide variety of automated and individual mailings in all areas. This includes:
 - notification of all issues related to course registrations, invitations, waitinglist entries etc.
 - notification of online tests and results
 - notification of feedback requests
 - different kinds of reminder emails
 - individual emails with self defined content
 - ...
- Administrators can see an overview of the users that are currently logged in. This overview can be displayed as a list or on a topographic map.
- Various tables can be exported to
 - MS Excel
 - PDF
 - XML
 - CSV
- > Various pages provide printviews which offer a printer-friendly view of the actual data.
- Users are informed in advanced in case of an upcoming maintenance, so they are not surprised while working with the system.

The preferences of the system can be set directly in the system.

- The most comprehensive pages have an own help page where all possible interactions are described in detail. Additionally there are info icons at every point where the user can possibly be uncertain about what to do and tooltips at every image.
- For some certain object types the application remembers the last instance which was selected in order to improve the usability. E.g. when you search for a user and then select him/her and view his/her details, he/she is saved as selected user. When you now go to the course registration page, this user is selected automatically for the registration. Moreover you can inspect the data of this user on the MyPages. Of course it is always possible to return to your own MyPages with just one click. This feature works for
 - user
 - usergroup
 - department
 - course
 - coursedate
